CERTIFICATIONS

CompTIA ITF+ (Information Technology Fundamentals) - Certified Candidate

December 16, 2022

This certification provides a solid introduction to key IT concepts such as computers, software, networking, and security. It's ideal for beginners or those shifting into the tech field, helping them build essential technical skills. It also serves as a stepping stone toward more advanced certifications and IT roles.

Pearson Database Certification - Exam Passer

May 15, 2024

A certification that validates foundational knowledge in database concepts, including data management, SQL basics, and database design principles. Demonstrates the ability to understand and work with core database structures, preparing learners for more advanced data or IT-related roles.

EDUCATION

Bachelor of Science in Information Technology

José Rizal University

2022 - Present

EXPERIENCE

Academic Resource and Knowledge (ARK): An AI-Driven Platform for Enhanced Learning and Knowledge Management

January 2025 - November 2025

Contributed to the backend development and frontend implementation of a web-based library management system. Designed and integrated GPT for semantic search and BERT for standard search processing, improving retrieval accuracy beyond basic SQL matching. Implemented the system's email notification feature and developed the book recommendation function. Also assisted with database structuring and interface integration to ensure smooth system performance.
